## Immersion tub station for several colours, type MULTI 3000-4000

An innovation for practical use

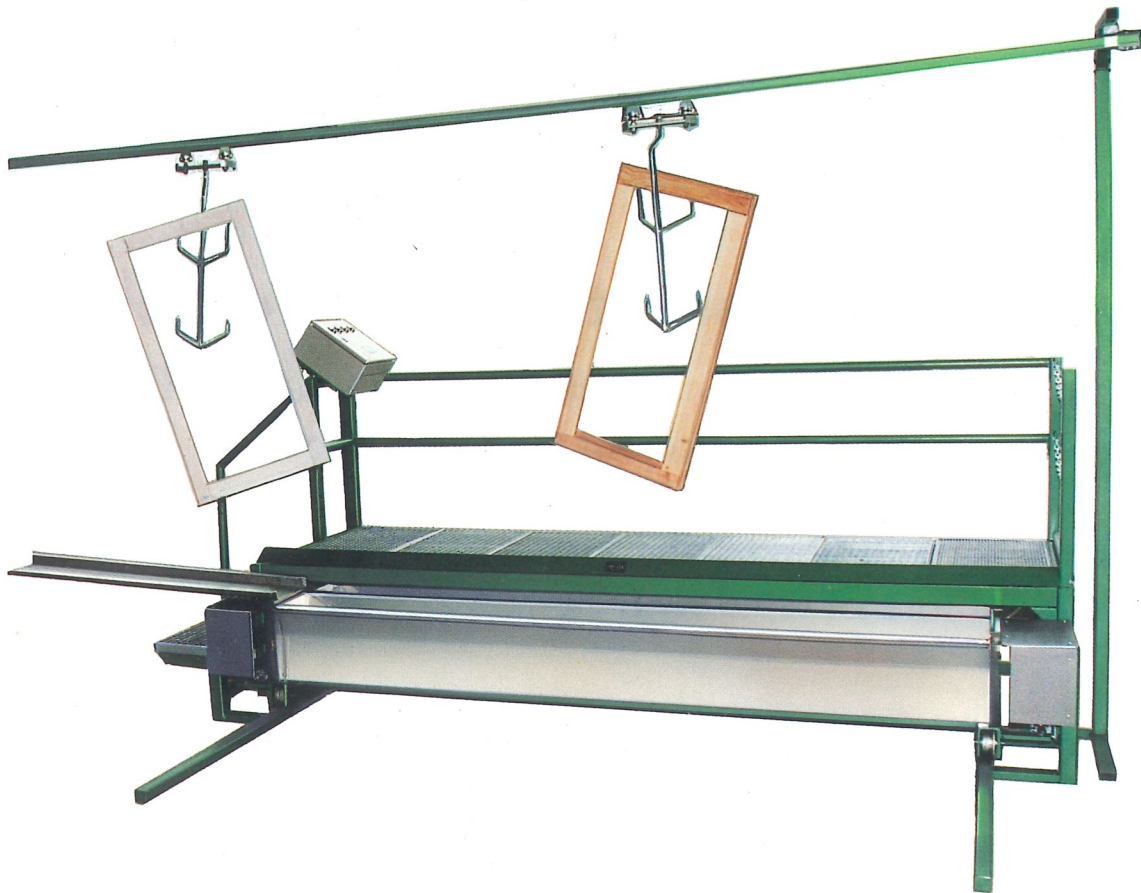

An economic solution to all manual immersion problems in the manufacture of windows.

TYPE 3000/4

- For impregnating in several colours and shades. Only one stationary operator's place is required.
- Integrated surface grating with collecting tub beneath, the solution to an optimally clean working place, the guarantee for best environmental protection.

- Several immersion tubs from stainless steel with cover (drop-off plate at the same time) as an integral unit for several shades.
- Each stainless steel tub (immersion colour) can be recalled by key pressure in the operator's desk and be taken to the immersion location desired.
- Immersion tub cover with two functions:
  - For protection of the impregnating liquid.
  - For use as drop-off plate
- Facilitation of work, due to the operator's platform with safety railing.
- No contaminated production halls.
- Only little space required, due to the immersion tub parking station.  
Example: Type MULTI 3000/4 – 4 immersion tubs in the parking station, length 3700 or 4300 mm respectively, width 1550 mm.
- Possibility of integration with former POLZER stainless steel tubs, which are already in use.

Measurements of individual tubs: 3000 x 200 x 345 mm  
4000 x 200 x 345 mm

Tailored tubs to be enquired for.

**Stainless steel filter and pumping centre** for cleaning and transfer pumping of immersion liquids as accessory part to be enquired for.
