Brush machine BM 600/1100

BOERE

The brush machine has been especially developed for cleaning of carpet tiles, car mats, etc., and is therefore very apt for hire companies. The special construction of the fibre brush provides for brushing the tiles in the right hair direction so that the tiles look as new when they come out of the machine.

In order to adjust the pressure on the carpet tiles, the brush unit is adjustable in height. The brush is provided with a synthetic hair. The feed speed is infinitely variable because of the frequency control.

The machine can also be delivered in a top working execution (type BMT) and as such the workpieces will be fed by a conveyor belt.

Technical data

Working width	:	BM 600	BMT 1100 mm
Brush motor	:	1,5	2,2 kW
Feed motor	:	0,55	0,64 kW
Feed speed	:	4 - 15 m/min	
Diameter exhaust hood	:	ø 150	ø 200 mm
Feed	:	rollers	conveyor belt

Measurements, weights and construction changes are subject to reserve.
