

PowerWrap

PowerWrap wrapping machines are intended for wrapping and laminating wooden and plastic materials, as well as metals for interior and exterior applications. Only your own creativity sets the limits for the profile palette. Using the PowerWrap, representing the upper echelons of modern wrapping technology, the operator greatly exceeds any previously achieved production index. Thanks to the modular system, a PowerWrap can be extended at will.

Features/Options

- Frequency-controlled drives.
- Cleaning and pre-treatment units.
- Aluminium strip control.
- Melter units for EVA, polyolefin and PUR adhesives in granulate or block form.
- Unwinder(s) for reel materials and/or automatic veneer magazine for sheet goods.
- Automatic reel change.
- Speed-independent adhesive dosage control for slot nozzle operation.
- Continuously variable slot nozzle or extendable adhesive coater roller with quick-change system for adhesive rollers.
- Nozzle positioning.
- Touch screen operation.
- Filter element with quick-change system.
- Pressure zone with quick-change system.
- Central width adjustment for the wrapping zone.
- Silicone-rubber rollers.
- Free-standing switch cabinet.

Specifications

Profile width up to:	250, 400 or 550 mm.
Profile height:	Up to 130 mm.
Transport speed:	5 – 80 m/min.
