## By Professionals for Professionals: The *MitreX* Double Mitre Fence

MitreX was developed to quickly and easily perform mitre cuts. Clever details such as simple length compensation for common angles as well as the tear-out prevention block make perfectly clear that experts have been at work here.

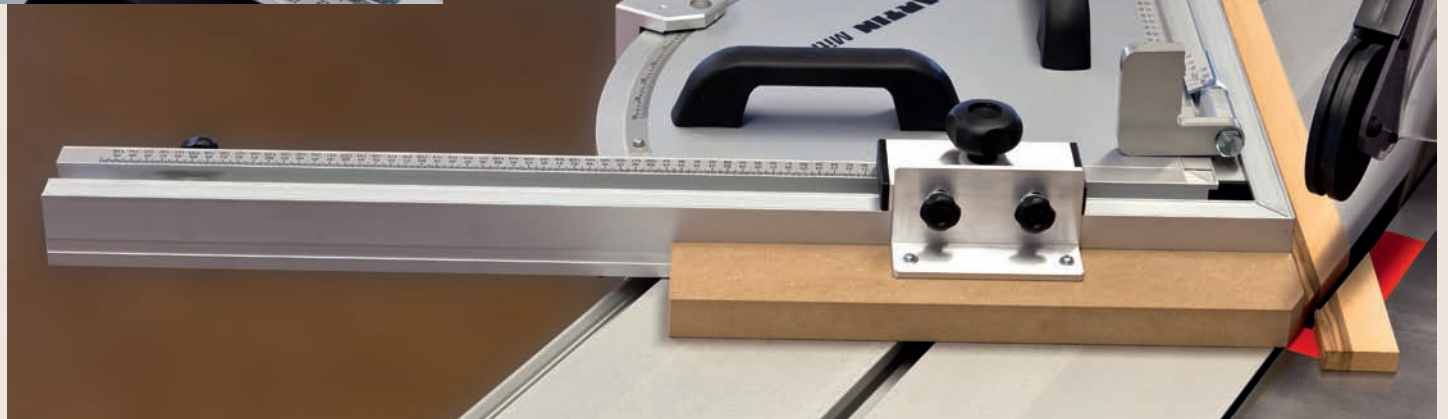

The analog fence that is equipped with a big angle scale can be adjusted very precisely and mitres can be cut from two sides. A precise angle cut is one thing, exact length compensation of the workpiece is also necessary in most cases. That is why length compensation for 10 predefined angles from 0° to 67.5° is provided. The fence stops can be set on both sides allowing for cutting lengths of 90 to 1,375 mm.

MitreX can be mounted on every MARTIN sliding table saw constructed since 2001.

### Specific advantages of the MARTIN MitreX:

- Length compensation on both sides for predefined angles 0°, 5°, 10°, 15°, 22.5°, 30°, 45°, 50°, 60°, 67.5°
- Counter blocks for tear-out free cuts also based on marks
- Angle setting 1/10° with magnifying glass
- Cutting length 90 to 1,375 mm
- Simple clamping with one hand
- Sturdy yet lightweight anodized aluminum execution
- Small device ensures good visibility over entire working area
- Soon to be available in digital execution
- MitreX can be mounted on every MARTIN sliding table saw from the T73 series onward. For information on older machines or machines from other manufacturers please contact us here at MARTIN.

**For more information you can also contact us here at MARTIN or get in touch with your local MARTIN dealer.**
