LC8

Autoamtic Denibbing-sanding Machine

The strength of stability

- Machine realized for sanding and denibbing of picture frames, linear profiles, furniture components.
 - Maximum stability and extreme accessibility, guaranteeing a maximum work precision; possibility to apply a wide range of working units.
- Transport by belts width 80mm. No junctions. Rectified rubber thread. Electrical controls distributed along the length of the machine, on each column. Control system detached from the machine. Control panel with Liquid Crystal display.
- Programmed for 5 languages. Reading of feed speed (mt or ft).

- ✓ Transport System by belt 80 mm
- ✓ Low operating costs
- ✓ Extremely robust, steel guides and ball recirculating pads
- ✓ High production speed
- ✓ Wide range of operator groups, both milling and sanding
