The SERIES KT-M Membrane Moulding Press

Experience in handling a multitude of panel and laminating materials, comprehensive knowledge in press technology, and today's technical construction possibilities were the prerequisites for finding the simplest solution to the most complex pressing cycles.

The world-wide patented WEMHÖNER Membrane Press technology now makes it possible to durably apply laminates to various pre-profiled substrates, regardless of how complicated, in consecutive or even simultaneous press cycles... with high quality results!

Regardless of how complex the panel profile is: whether kitchen or cabinet fronts, toilet seats, casket lids, automobile components or dashboards, facing panels and more... the Membrane Press will laminate it quickly and safely, even if it's MDF.

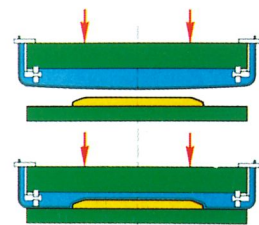

Surfaces, grooves, fluting, corners and edges all in a single, simultaneous work cycle.

Furthermore, the Membrane Press doesn't require workpiece specified tooling – which completely eliminates resetting the machine when changing profiles. Saving you time and money.

And because the Membrane Press can even be used as a short cycle or surfacing press, its versatility truly can't be beat.

The advantages are clearly obvious:

- A single all-inclusive press for surfaces, edges, corners, grooves and profiles.
- Workpiece specified tooling is a thing of the past, no change-over, no down time when changing panels, materials or profiles.
- Shortest possible pressing time due to the pre-heated pressure medium in the membrane chamber.
- Air convection ensures uniform heat distribution.
- Release and cool down device for thermoplastic laminating.
- Considerably reduced energy requirements.
- High specific pressure.
- Highest laminating quality.
- Special sealing and fitting system guarantees extended membrane life.
- Can be retro-fitted for use as a double sided Membrane Press.
- Flexibility and variability... even as a short cycle or surfacing press.

**SIMPLE AND PERFECT
SIMPLY PERFECT**

Prior to pressing, without foil

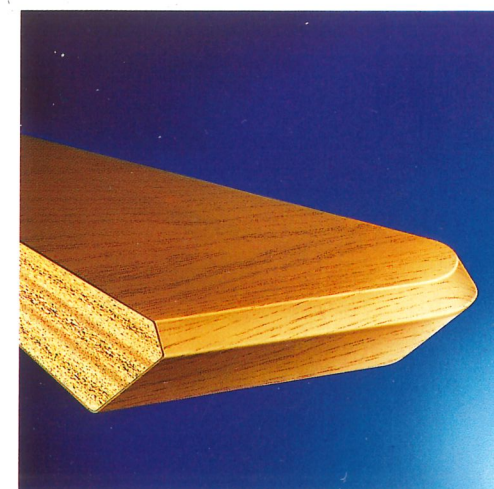

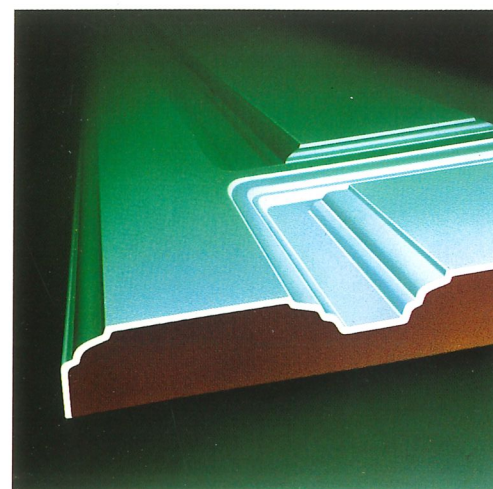

Prior to pressing, with foil

After pressing, completely laminated
