

GAMMA 800

GAMMA 800

DESCRIPTION

Manually copying milling machine for processing kitchen worktops, shelves and bathroom furniture.

With the milling machine GAMMA 800 it's possible to execute counter shape figures directly on the worktable by copying the original workpiece and executing in this way, with the fix shape, the following processing. A single counter shape is used for several processing, reducing in this way the machine's equipping times. With the machine GAMMA 800 it's possible to execute:

- facing for 90° male – female plane's junction.
- workpiece's facing on measure
- round holes of different diameters for sinks , lights and hoods.
- squared and rectangular holes of different dimension for sinks and worktops, seats for hosting the 90° assembling ironmongery of the worktops on a single supplementary panel.
