

Double or single knife veneer jointing guillotines and veneer cross cutters

cutmaster

Computer controlled double knife veneer jointing guillotine AFD

The double knife veneer jointing guillotine assures parallel cutting and the highest quality veneer edges. During the cutting process the veneer bundle is clamped by the pressure beam.

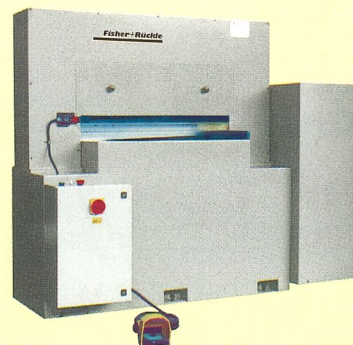

Single knife veneer jointing guillotine AFECO / AF

Heavy duty machine for jointing any type of veneer. Pressure beam (width 150 or 360 mm) and knife hydraulic driven. The blade holder is guided between two shoulders, which guarantees absolute rigidity. Optional with computer controlled second cut and fully automatic strip cutter.

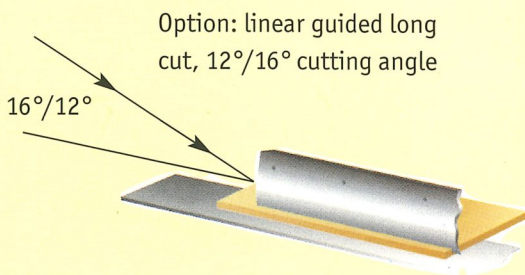

Cutting angle approx. 45°

Due to the optionally available linear guided long cut (12°/16°) the edges are clean after cutting. The firm, stationary supporting- and cutting table enables an automated veneer package unloading.

Veneer cross cutter AFH

Cross cutter with steel counter blade (inclined cut), on both sides vertically guided. Ideal for veneer up to 2,5 mm thickness. Blade and pressure beam movement are controlled by hydraulics.

Option: linear guided long cut, 12°/16° cutting angle

16°/12°

New

Double sided glue application on veneers for double benefit

omnimaster | 2

Perfect veneer glue application and longitudinal splicing in one pass!

Due to the two sided glue application on the veneers, the glue is applied absolutely reliable, the production high and the repair work small.

Absolutely reliable glue application

A perfect glue application is ensured due to two glue application units.

Quick and easy accessible glue pots

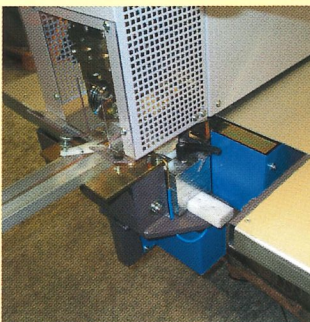

For fast and simple refilling and/or cleaning of the glue pots.

Operation efficiency

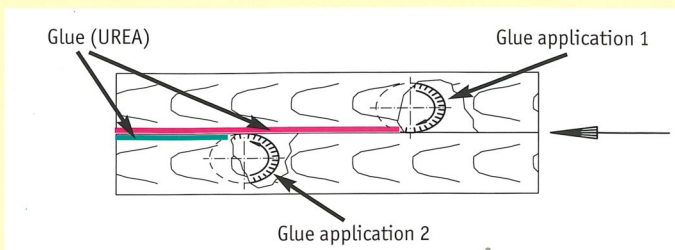

High production due to certain and reliable glue application.

Extended glue pot life

Due to the cooling unit for both glue pots.
