Werkzeugauswahl

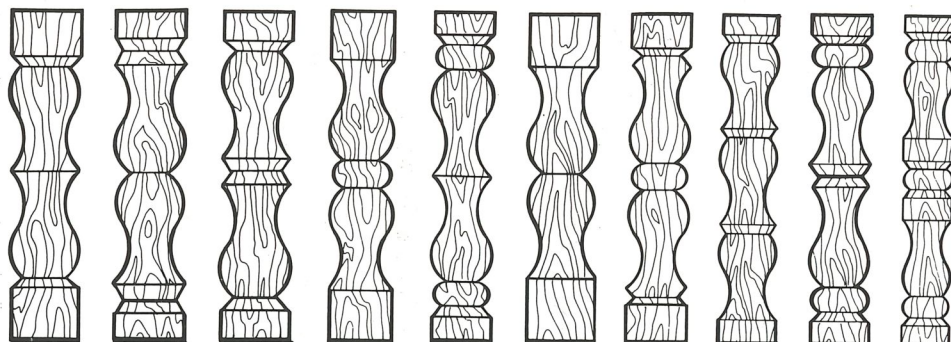

HOLZ-HER SECUR-Fräskopf, Frästiefe max. 30 mm

Wegen des günstigen Anschaffungspreises eignet sich der HOLZ-HER SECUR-Fräskopf besonders bei umfangreichen Profilvarianten und kleineren Stückzahlen. Optimale Sicherheit durch Zahnung am Messerrücken und durch Fräskopfnute. Die Aufteilung der Profilform ist durch vier Messernuten möglich.

HOLZ-HER Kompakt-Profilfräsersatz, Frästiefe max. 65 mm

Bei großen Werkstückserien und Fräsarbeiten über 30 mm Frästiefe ist der Kompakt-Profilfräsersatz erforderlich.

Beispiel für die Anwendung vom HOLZ-HER Kompakt-Profilfräsersatz Nr. 1

Die Wirtschaftlichkeit eines Fräswerkzeugs kann je nach Profilform bereits vor der Werkzeugherstellung entsprechend berücksichtigt werden. Sie ist dadurch gegeben, daß die verschiedenen Profilvarianten durch Hinzufügen oder Weglassen von Kompaktfräser- bzw. Profilmessersegmenten, durch Umschlagen der Werkstücke und Veränderung der Anschlagpunkte erzielt werden.

Weitere Standardprofile siehe HOLZ-HER Standard-Fräswerkzeuge.
