Rotor filter

Rotor filter, type HL - HLD

JKF dust filter, type HL and HLD, is a bag filter.

The filter is used for mounting on a silo top, over a container or where transport of shavings to a refuse depot by means of a duct system is required.

The emptying of the filter is made by means of a rotary valve in the hopper.

The standard filter media is cotton or 401 g polyester.

The filter is manufactured from 1,25 mm and 2 mm galvanised sheet.
