

Threephase heavy duty fork lift truck with enclosed AC motors

Rotating seat (optional) for relaxed operation while reversing

New operating concept with SOLO- or MULTI-PILOT in an armrest that accompanies the arm movement

Curve Control for optimum stability

Automatic parking brake; no rolling back on inclines

Maintenance-free laminated brakes

EFG 535–550

Electric four wheel fork lift trucks (3500, 4000, 4500 and 4990 kg)

Using innovative threephase AC technology offers a range of advantages:

- Maximum throughput with peak acceleration, travel and lift levels.
- Longer uptimes through optimum efficiency and more effective energy regeneration.
- Precise control and wear-free regenerative braking by releasing the accelerator pedal and feeding energy back to the battery.

- Maintenance and wear-free enclosed three-phase motors (without carbon brushes) to IP 54 safety rating.

With outstanding travel/lift speeds and excellent acceleration and gradeability, these electric fork lift trucks achieve throughput levels to rival diesel/LPG trucks. The enclosed motor design allows them to be used for both indoor and outdoor applications. Even

extreme application conditions such as dust, chemicals and humidity do not affect the reliability and useful life of the motors.

These threephase AC fork lift trucks are niversally applicable, offer a comfortable operating environment with their exhaust-free and quiet drive systems, and reduce running costs through low energy consumption.

2) 541 mm for DZ mast; for integrated sideshift: x = 542 mm (573 mm for DZ mast); for sideshift attachment: x = 582 mm (613 mm on DZ mast)
3) 60 working cycles/h

Make use of the advantages

Comfortable workplace

The ergonomic operator position ensures relaxed, fatigue-free operation over long shifts:

- Low entry height with a step that is easily visible from above. Large, level footwell with automotive-type pedals.
- Adjustable steering column and adjustable comfort seat for optimum seating position.
- Clear view: mast and fork carriage offer a particularly wide field of vision.
- Hydraulic power steering: easy to operate.
- Particularly comfortable operation with all the main controls incorporated in the armrest that accompanies the arm movement (height and length are adjustable).
- Limited vibration as the cab is not connected to the chassis (floating cab).
- Relaxed operation even when reversing with the rotating seat device (optional). Rotating seat can swivel up to 15°.

Rotating seat (optional)

SOLO-PILOT

Wear-free brakes – automatic parking brake

Three brake systems ensure safe, comfortable and predominantly wear-free braking:

- Motor brake for wear-free regenerative braking via the accelerator pedal in normal travel mode.

- Oil immersed laminated brake acts as safety brake. Wear-free and fully enclosed.
- Electric spring pressure brake acts as parking brake. The brake applies automatically when the truck is stationary and releases again when it starts up. This prevents the truck from rolling away accidentally.

Maintenance-free motors

Three-phase AC technology across the board: drive motor, hydraulic motor, steer motor:

- High torque for fast working cycles.
- 15 % more efficient than shunt-wound motors.
- In many cases a single battery charge can cover two shifts.
- No carbon brushes, no collector – no maintenance.
- Fully enclosed to IP 54. Maximum useful life even when operating in dusty and humid environments.
- 2 year warranty on all motors.

Safety

Outstanding travel dynamics and performance levels also require a high level of safety:

- Automatic travel speed reduction when cornering with Curve Control.

- No accidental rolling back on ramps/inclines with automatic parking brake.
- Safe handling with long wheel base.
- Electronic and hydraulic overload protection.
- Safe data transmission between the electronic components with CAN-Bus technology.
- Maximum stability through extremely low centre of gravity and high mounted steer axle.

Drivers display

Intelligent electronics

- Smooth travel, dynamic reversing and pinpoint positioning with minimal energy consumption through impulse electronic control system.
- Optimum adaptation to every application with five individually adjustable operating programmes.
- Monitoring of all components and service data storage for rapid and cost-effective diagnostic system maintenance.
- Drivers display with digital hourmeter, battery discharge indicator with lift cut-out, time, error code and warning displays.
- Steering wheel position display.
