Small Machines

KUPER

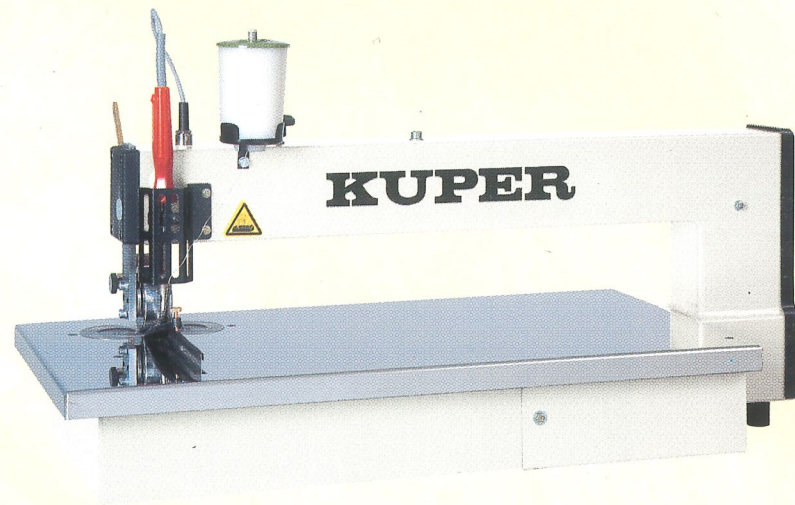

The small machines from KUPER

Efficient and low cost models

KUPER Veneer Splicer FW/Mini 630

The ideal gluing machines for small veneer quantities with the technical advantages of the KUPER Zig Zag Splicers: Discs with tolerance adjustment. Gluing medium: Special KUPER glue thread.

The KUPER FW/Mini 630 is also available as movable stand machine. The machine can be lowered into the stand.

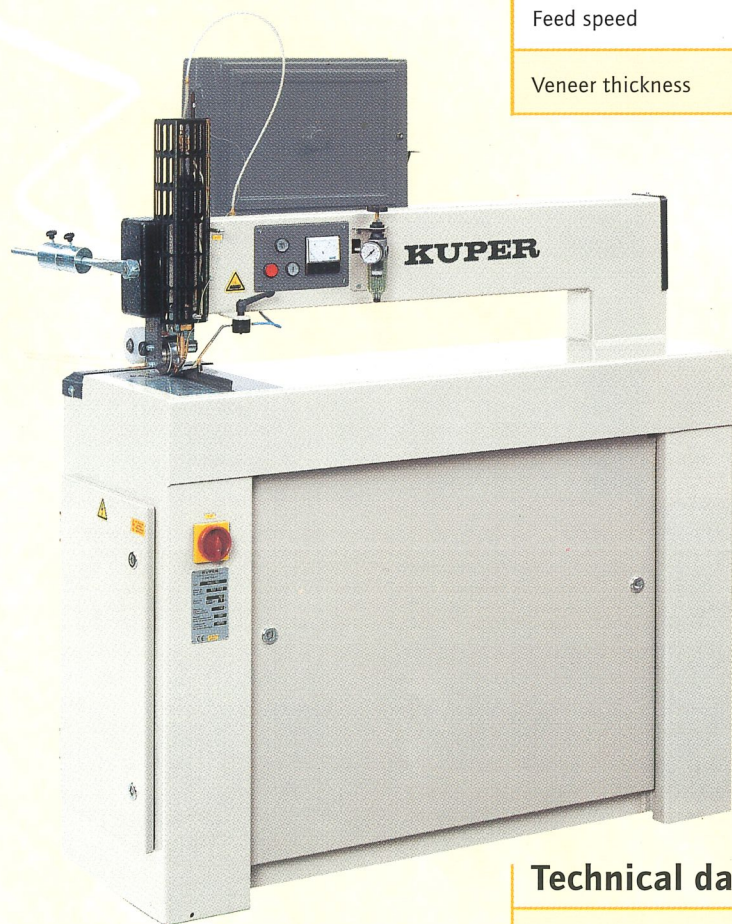

Technical data

Throat depth	630 mm
Feed speed	approx. 7 m/min.
Veneer thickness	approx. 0.4-2.0 mm

KUPER Zig-Zag Veneer Splicer FW/J 920

The KUPER FW/J – has been proved 1000 fold-fills a gap, where until now one has not been able to consider the large FW for reasons of space and costs. The KUPER FW/J has the technical advantage of all KUPER machines: the discs and the glue thread. The machine can be changed to use veneer papertape in a few seconds. An especially low cost and efficient model.

Technical data

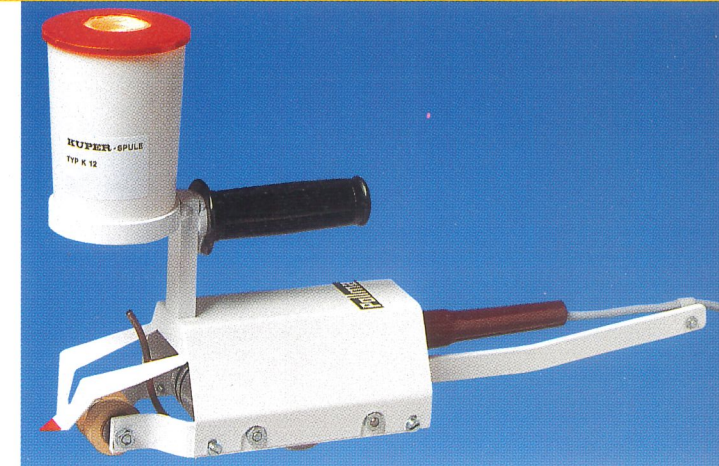

Throat depth	920 mm
Feed speed	approx. 15 m/min.
Veneer thickness	approx. 0.4-2.0 mm

Compressed air connection required

KUPER HFZ/4 Veneer Hand Stitcher

(KUPER license, DBGM)

Easy and simple handling. Ready for immediate use, low power consumption. All the advantages of the KUPER glue thread. An ideal device for zig zag joining small quantities of veneers in an efficient and clean way.

KUPER KHL/1 and KHL/2 Veneer Hand Stitcher

The KUPER hand stitcher uses the KUPER glue thread as glueing medium. An ideal device to patch and bind splitted veneers. Because of the perfect construction all the advantages of the glue thread can be fully utilized. The simplicity of this stitcher makes it child's play to handle. Simple manipulation, frictionless procedure, maintenance free usage. Type KHL/2 is applying two glue threads simultaneously.

KUPER KHL/1

KUPER KHL/2

With all KUPER Zig Zag Splicers the spliced sides are placed face down for pressing, therefore no sanding of the gluing medium is necessary.

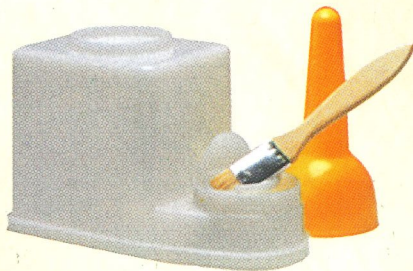

KUPER MINIS

Products from the KUPER trading range

KUPER TS Sparboy Glue Container

Airtight lock prevents drying out of glue and similar fluids which easily evaporate when applied by hand brush.

Available in 3 sizes:
0.45 l / 0.9 l / 1.5 l

KUPER Arch Routing Device BFG

with assembled hand router, 220 V/2000 W, electronic and radius-bar of 1.5 m for radii from 0.3 to 1.5 m. Radius-bar exchangeable for radii up to 6.0 m. The KUPER BFG guarantees a trouble-free manufacturing of all radii occurring in round and segment arches. The time-consuming manufacturing of templates is no longer necessary. Special equipment: turret-head and copy-roller.

KUPER Glue-Star

Handy, exact dosage, for glues of various viscosities which do not set when cut off from air. The comprehensive nozzle range – including special nozzles – makes the Glue Star universally applicable.

Available in 3 sizes:
5.0 l / 8.0 l / 12.0 l
Air consumption: approx. 5 bar
