Panel saw – new generation

A panel saw must primarily be able to shape wood, plastic or comparable materials – safely, economically efficiently and in an operator-friendly way.

A panel saw also may be attractive, though.

Not only psychologists know that shapes and colours in the working environment influence the mood, motivation and creativity positively.

680|10 Operating panel at the machine body

680|10 Rip fence manually adjustable

680|20 Operating panel at eye level

680|20 Motorized rip fence

The 680|10 and 680|20 models embody a new panel saw generation, harmonising function, colour and shape.

They are based on the know-how of experienced Panhans technicians. Many components of tried and tested machines have been optimised, many others have been completely newly developed.

Pricing is attractive as well: the basic version 680|10 is available starting at ten thousand Euro and equipped comprehensively.
