

intelliDivide Cutting

Optimization software for cutting processes on saws.

Simply upload the parts list. Done! intelliDivide gives you a choice of optimized cutting patterns in an instant. Depending on requirements, results can be based on reducing waste or focus on the shortest production time or the simplest handling. And all without having to invest in software and computing power – directly from the tapio cloud.

Your benefits at a glance

- ✔ **Compatible with all saws:** Your tapio-ready saw from HOMAG is automatically identified. There are configuration options for all other saw types.
- ✔ **Flexible and mobile:** You can use intelliDivide whenever you want and on whatever you are currently using: a stationary computer or any mobile device with internet access. No matter whether you use iOS, Android, Windows or Mac OS.
- ✔ **Zero capital investment costs, zero hardware costs:** intelliDivide is Software as a Service. You only pay for the actual use – without having to invest in on-premise software, updates or computers.
- ✔ **Greatly reduced personnel costs and time involved:** Multiple alternatives are always calculated for you to choose from. The results are immediately ready for the machine, requiring no adjustments. No manual post-processing required.
- ✔ **Material management included:** The materialManager for central management of material types and board sizes for the optimization is included.

Quick. Inexpensive. Innovative.

intelliDivide – features and versions at a glance

	intelliDivide Advanced	intelliDivide Premium
Optimization “Balanced solution”	✓	✓
Optimization “Minimum scrap”	✓	✓
Optimization “Minimum waste” (scrap + offcuts)	✓	✓
Optimization “Shortest cutting time”	✗	✓
Optimization to “Minimize handling” (headcuts, recuts, offcuts)	✓	✓
Support flexTec & HPS machines	✗	✓
Parts list import from XLS(X) and CSV data	✓	✓
intelliOptimizer Stacking integrated*	✗	✓
Import Cut Rite results for comparison	✗	✓
Text information for labeling	✓	✓
Automatic parameter setup for tapio-ready machines	✓	✓
Data transfer to CADmatic 4.x / 5.x	✓	✓
Connection to materialManager	✓	✓

*intelliOptimizer Stacking optimizes stacking on flexTec machines and gives you the choice between highest output and robot-optimized operation.

Special features

- Direct transfer of the selected result to tapio-ready machines
- Calculation of important key figures such as material costs, parts/min. or average stacking heights in the cutting process
- Definition of offcuts by minimum and maximum dimensions
- Automatic transfer of data from HOMAG productionManager
- Direct access to board data from the HOMAG materialManager
- Can be combined with intelliDivide Nesting – two technologies, one system!

Technical requirements

- intelliDivide Cutting is a browser application for use on a PC or laptop
- Internet access (DSL, UMTS, LTE): min. 5 Mbit/recommended: 50 Mbit
- Browser application: for use on a PC or laptop, we recommend using „Microsoft Edge”, “Google Chrome” or “Firefox” as a browser
- Log in via tapio login (tapio account required, registration at www.tapio.one)
