UNIMINI

This is the simplest and most economic work centre, developed for relatively small manufacturing and limited working field. The machine structure with a **single working table** and a stroke of **2.030 mm in the X-axis** makes it very attractive in small or medium size companies, where **floor space is not enough for a bigger model**, or where **flexibility is required but there is no need for a large production capacity**.

With its **vertical axis stroke of 750 mm** and the **width axis stroke of 490 mm** the model UNIMINI matches most of the advantages of the larger models with a solid and compact structure.

Working head : **one double spindle motor of 5.5 kw (7,5 hp). Rpm 500/18000**
