„BEAR“ FORCE AND RELIABILITY

HORIZONTAL SHREDDER

***RLZ -
RHZ and RHZ plus***

Shredders with link chain feed, the RHZ 400 - 1300 plus series

RHZ plus series horizontal shredders are used to shred long and short wood waste, chip board, packages and strips. The materials can also be fed to the rotor in packages using the special link chain feed.

The material to be shredded is entered and fed to the rotor via a vibration chamfer that is as wide as the horizontal shredder.

The material stack is caught by the chain belts, pressed together and supplied to the rotor.

The feed is controlled based on load.

A rotor construction with a diameter of 500 mm is available for more throughput.

Compact construction, the RHZ 300 - 1300 S series

The Reinbold RHZ series is equipped with smart details: Two feed rolls and special strips ensure better material feed and simpler loading of the machine. The optional second feed roll ensures optimal material intake and thus a constant high throughput. The feed unit is controlled based on load and shuts off automatically if there is too much material. Thus the rotor can continue shredding without malfunctioning and is not overloaded. Thus, a maximum throughput guarantees with low power consumption.

Strip shredders with angled feeds, the RLZ 400 - 800 series

The small strip shredders with angled feeds in the RLZ series for disposal of long thin wood waste such as strips and slats are implemented right beside the machining equipment.

The material to be shredded is entered directly in the rotor width of the RLZ. The material is supplied directly to the rotor using a feed roll.

The feed works based on load and shuts off automatically. This is carried out until the material is fully shredded.

The circular knife system: Cutting knives that lower your operating costs!

* New at Reinbold:

The outer broaching knife, are replaced by the circular knife V8. This promotes a uniform crushing of materials over the entire length of the rotor.

Rotor Version 5 (40 mm knife diameter)

Rotor Version 7 (40 mm knife diameter)

Rotor Version 8 (30 mm knife diameter)

The highly efficient scissors cut of the concave ground circular cutting heads provide a very high work rate with very little effort. The knife holders are welded or mounted on the rotor and the round knives can be turned up to **8 times** with just a few adjustments before having to be exchanged completely. The use of various types of knives enables job-related adjustment of the shredder to the material being processed.

The knives with horizontally integrated square knives are especially suitable for manufacturing granulate which can be used in cellulose production.

Machines from the Reinbold product line:

Series AZR 600 - AZR 800 S:
the universal single shaft shredder for
woodworking shops

Series AZR 800 - AZR 2000 S Gigant:
the single shaft shredder for professional
compaction of recyclables

Series RMZ 500 - RMZ 1000 S:
the four-shaft shredder that is ideal
for shredding long stock

Series RB 20 SV - RB 60 SV:
the small but powerful briquetting press

Series RB 100 - RB 300 S Flexible:
for briquetting chips and dust

Series RB 400 RS: for the industrial production
of square briquettes

Drawing on its many years of experience, Reinbold, with its broad range of machines, is able to offer ideal solutions for different applications in material shredding and briquetting.

Our testing facility is available to perform tests on your material.
