BSM MULTI-RIP SAW - you can't buy better performance at the price

- **Wide application range; single or multi-ripping ...**
- **Produces up to 17 pieces in one pass.**
- **Low initial outlay quickly recouped through high output.**
- **Compact, robust construction for excellent sawn finish.**
- **Ultra-positive feed with maximum safety.**
- **Integrated controls for less effort, fewer errors.**

Sustained Productivity

Fast saw changeover — with up to 18 on one gang — keeps downtime to a minimum.

Simple, instant dial selection of ideal feed for type of work, with six speeds to choose from.

Centrally located controls make for faster setting, fewer errors and less fatigue.

Production Versatility

The machine will cut to a depth of up to 115mm (4½ in) and can accommodate sections large and small in a variety of materials, including formica and plastics. Splitting and grooving too can be carried out at one pass... quickly accurately and safely.

A wide range of optional equipment is also available, to increase the flexibility and product capability still further.

Operator Safety

Since stock is held down securely, there is much less risk of ejection.

An anti-kickback device is fitted as standard to reduce sliver hazards and give even greater protection.

With no-volt and overload trips built-in, optimum safety is assured.

Accuracy with Economy

Under-table mounted saws provide greater rigidity and stability.

The combined positive feed action of the idler roller table bed and overhead drive mechanism allows stock to be fed right up to fence with minimal resistance. Even bowed timber can be sawn accurately, thus reducing material waste.

A choice of 25, 30 and 40 h.p. motors allows machine power to be closely matched to application, saving energy and expense.
