

The Economic Weeke Alternative:

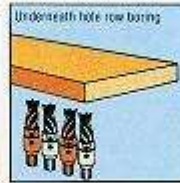

Precision Dowelhole Boring Machine Rekord BST 40

Quick and simple setting – without electronically operated and motorized travelling equipment.

Do you prefer short setting up times? We help with simple and quick manual operation. Expensive CNC-control is avoided!

Experience and technical solutions are the guarant for best boring accuracy. Our manual setting devices have been designed for rapid change, making the use of electronic facilities unnecessary.

The economic machine, model BST 40, is the perfect answer. Detailed view for vertical support.

Vertical insertion device

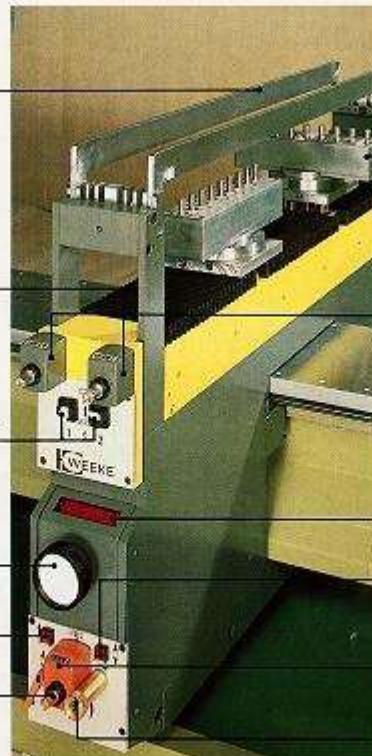

Telescoping hood on boring supports

Pneumatically pre-selection for boring units, incl. locking devices for boring blocks and units

Handwheel to set machine lengthwise

Selection switch to change drills

Variable control to adjust speed on boring feed unit

Pneum. operated swivelling- and boring devices

Depth adjustment on boring units (Y) incl. digital readout

Lengthwise LED Measurement readout

Pre-selection switch - Locking device is released

Boring depths adjustment provisioned with digital readout.

Variable control to adjust speed on feed for throughhole boring (hydr. operated)
