

Edge banding machines Optimat KDN 630 - KDF 670 2C

Optimat | profi line

Sophisticated edges for sophisticated customers

Optimat: Hi-Tech needn't cost more

In "Optimat 2", the Homag Group presents a new generation of machines for the wood processing industry and woodworking, which are even more tailored to the requirements of our customers. All Optimat machines share the same leading edge technology, the same legendary quality and the reliability associated with the Homag Group. And since Optimat machines are produced in series, you can also reap the financial benefits.

Pioneering machine design

Besides its groundbreaking technology, the new Optimat equipment also sets new standards in machine design, guaranteeing maximum value retention over many years.

Intelligent automation

Life today without electronics would be unimaginable. The new range is equipped with the following as standard:

- Electronic line control
- Electronic frequency changer, wear-free with integrated motor brake
- Chain track central lubrication
- Electric hot melt temperature monitoring with automatic temperature lowering during longer pauses in operation
- Internal modem for the possibility of using remote diagnostics
- comfortable IPC-Control

Optimat KDF 660 C

Optimat KDF 660 C

Efficient processing units for flexible production

All processing units share high precision, quick changeover and a high safety standard.

Problem-free gluing

KDN/F are equipped with a leak-proof gluing unit.

Economical granulate glue is used and the adhesive quantity can be precisely dosed.

The machines are equipped with an automatic coil magazine as standard, also for 3 mm PVC edges.

Fixed lengths can also be processed with ease.

User-friendly processing units

Efficient processing units for flexible production

All processing units share high precision quick changeover, service-friendly design and a high safety standard.

Machine control

All standard models are equipped with PC 16 comfort control. PC 16 comfort control is very simple and clear to operate. Set-up times are significantly reduced as the controls can save numerous processing programs which can be recalled within seconds.

Operating data and plain text diagnostics are also included as standard. The standard modem allows for remote diagnosis, reducing downtime.

1. Joint trimming unit

Two trimming motors of 2.2 kW each, 12.000 rpm, rotating direction: synchronous / counter running. Equipped with diamond cutters as standard. This process provides optimal edge quality.

2. Standard gluing unit

Leak-proof quick-heating container (QUICKMELT as option). Infrared heating system. Automatic edge infeed for coils and strips.

3. End Trimming unit, straight/bevel

Two trimming motors of 0.35 kW each, 12.000 rpm. Drawing cut for high accuracy, high precision linear THK guides.

4. Flush trimming unit

Two trimming motors of 0.55 kW each, 12.000 rpm, swivelling from 0-25 degrees. Equipped with combination straight / radius cutters. Digital counters for all adjustment. One or two units are included according to machine type.

5. Contour trimming unit

For corner radiusing of thick PVC edges and cover edges on post and soft formed parts. Two motors of 0.35 kW each, 12.000 rpm, equipped with radius insert cutters.

6. Profile Scraping unit

For scraping of radii or chamfers. Horizontal / vertical tracing.

Surface scraping unit (optional)

For scraping and / or cleaning of workpiece surfaces in glue jointing area to remove residual hot melt. Pneumatic blow-off device for cleaning cutting edges, as well as pneumatic adjustment.

7. Buffing unit

For polishing of edges. 2 motors of 0.18 kW each (with optional Oscillation device and pneumatic insertion control).

It pays to be a Brandt Customer

Brandt is everywhere

Our extensive service, sales and support network means shorter distances for you. Brandt is never far away – no matter where you are in the world.

Expertise

Continuous training of the sales and servicing personnel of our sales partners at the Brandt training centre guarantees optimal and expert care.

Identical parts, simple handling

Many parts, control elements and component groups are common to all machines and systems of the Homag Group.

This facilitates operation and replacement part pooling, and accelerates servicing and maintenance.
