

Wide Belt Sanding Machines SVR

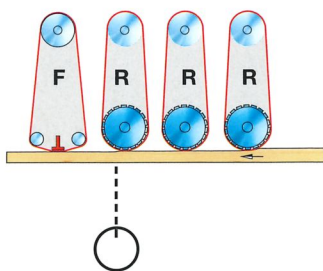

Optimat | profi line | power line

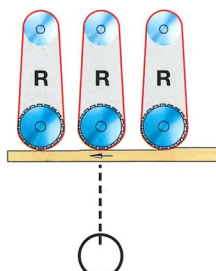

Bütfering SVR

From its constant pass-line frame to its large diameter height adjustment spindles, from its steel pressure bar guidance system to the large mainmotors used, the SVR series is built with high production in mind. The solid construction is combined with the latest technology to facilitate rapid and repeatable set up times with ease of operation. All SVR models use program setting via a colour touchscreen and utilise servo-regulated contact roller positioning for the utmost control over the sanding process.

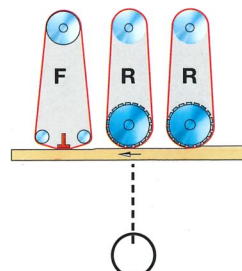

The SVR series is ideal for the processing of all solid wood components such as glued up panels or kitchen cabinet doors, where either the stock removal rate or the duty cycle require the use of a heavier machine.

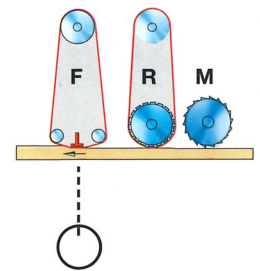

Four head calibrating and finishing sander with three contact rollers and one air cushion pad

Three head calibrating and finishing sander with three contact rollers

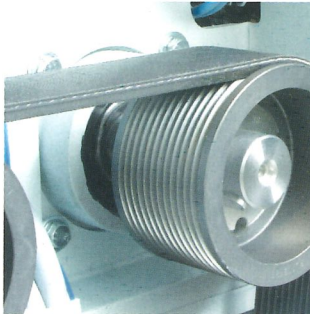

Three head calibrating and finishing sander with two contact rollers and one air cushion pad

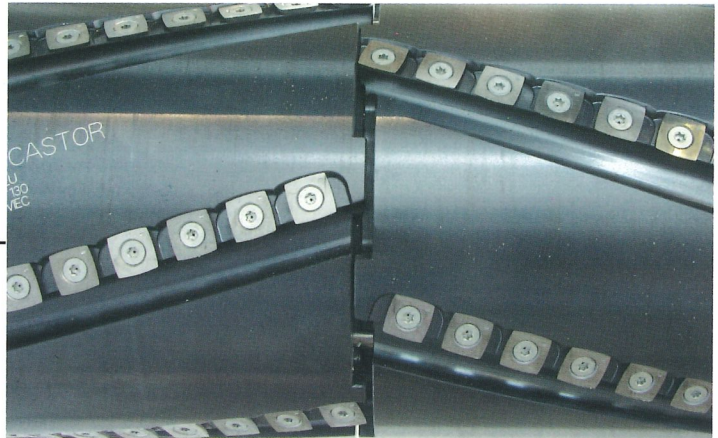

Planer sander with cutter head, contact roller and air cushion pad

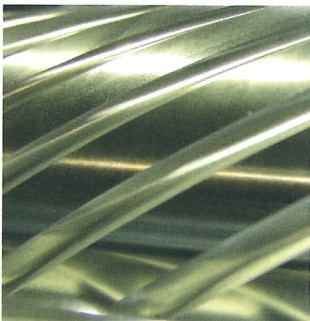

The keywords for the SVR are 'Heavy Duty' and 'Precision'.

Poly V-belts

Spiral cutter-block for a perfect cut up to 4 mm / 0.16 inch in one pass

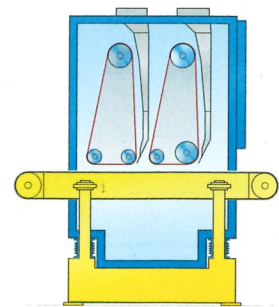

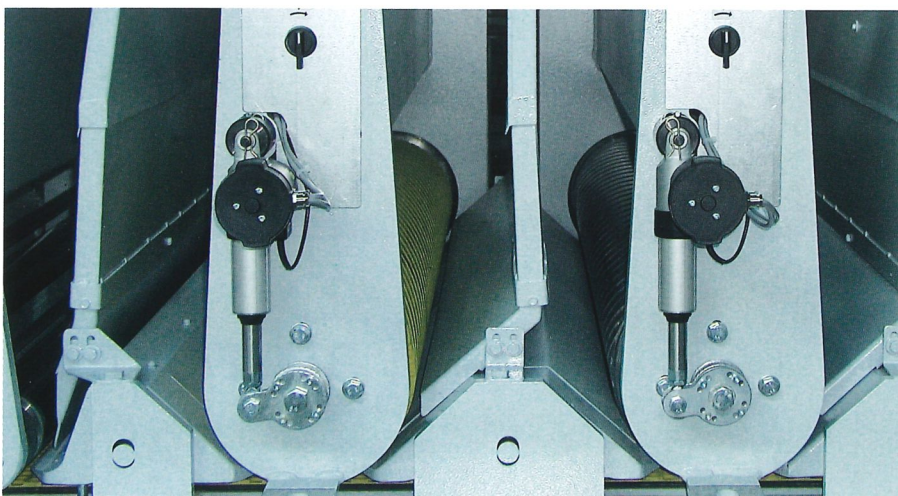

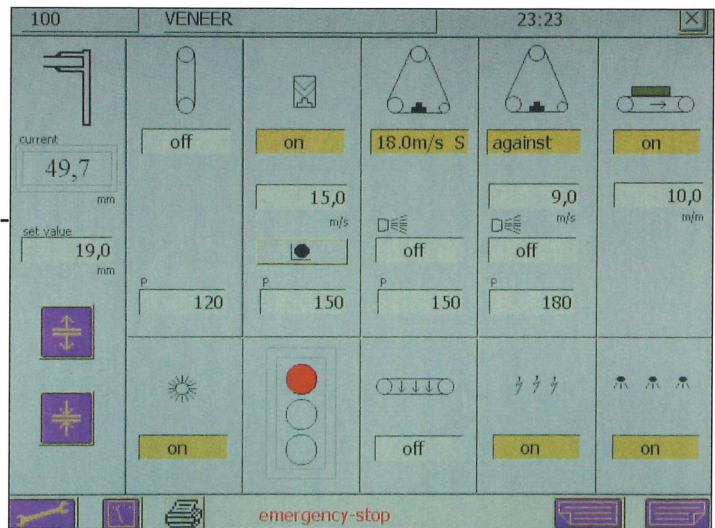

Profiled steel contact roller with automatic positioning

Operator Terminal for complete machine control

Oscillating air-jet belt blower, activated by the workpiece

Constant passline

Heavy duty sanding heads with contact rollers
