

**Today surface is more than
shape and colour...**

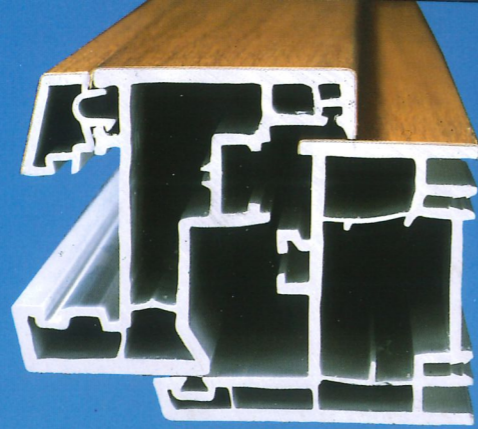

...we offer it !

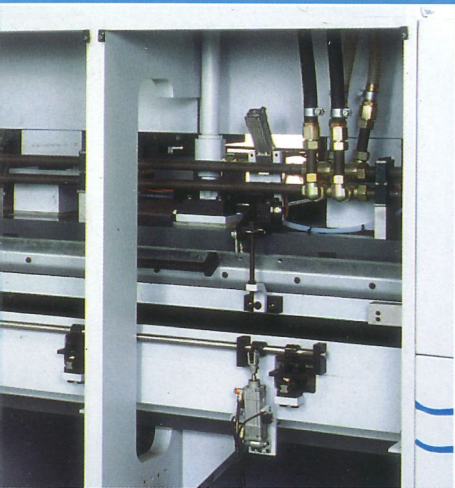

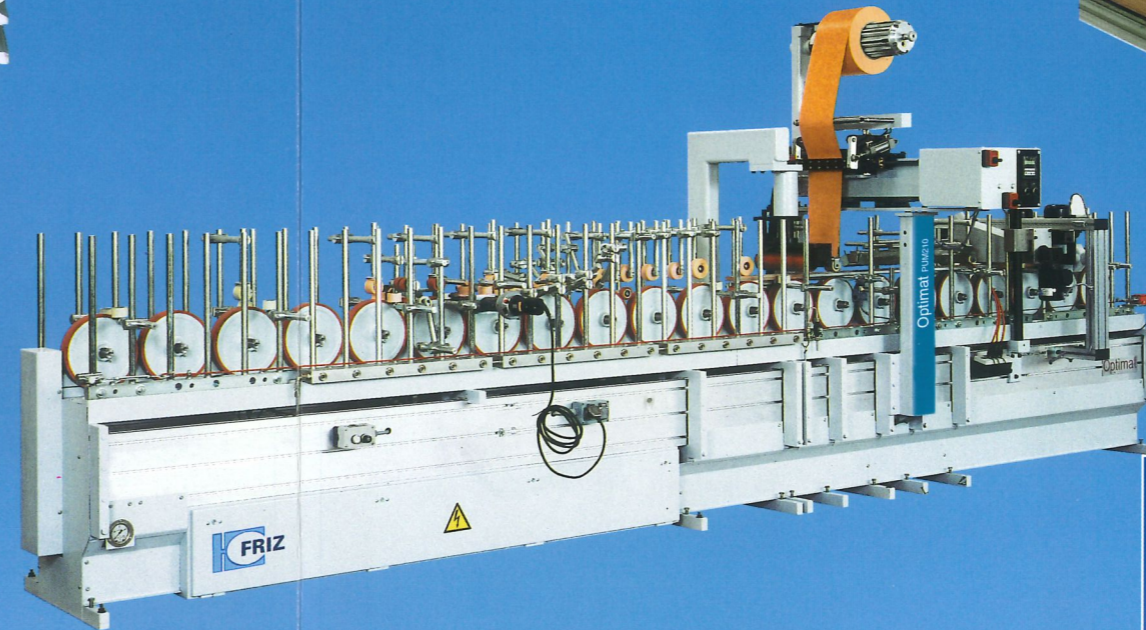

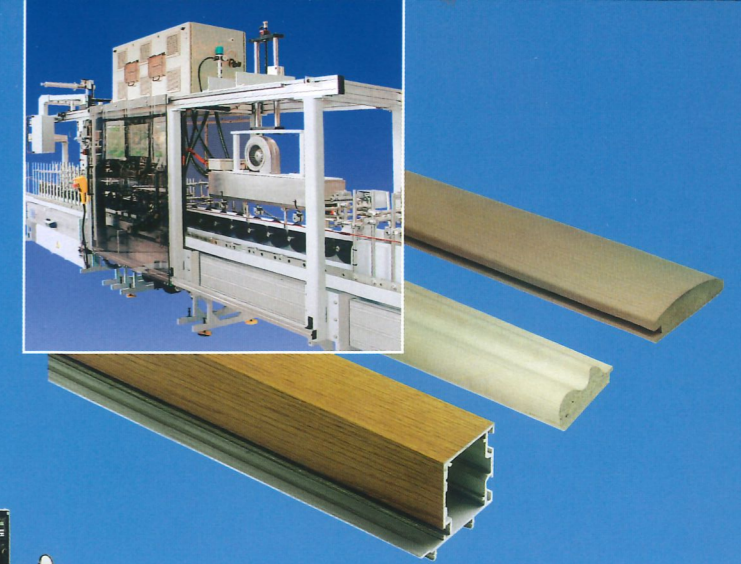

We can give you here only...

...a slight impression of our product range. Our machines and installations can be classified into three fields of application: profile wrapping, membrane form pressing and surface laminating.

Already in 1965 we delivered the first profile wrapping machine with throughfeed technology. In the last few years, Friz reduced e. g. setting times by more than 50 %. What does this mean to you? Simply that the extremely high availability of our products results on the one hand, from our very long experience and on the other hand, from our well-known innovation capability.

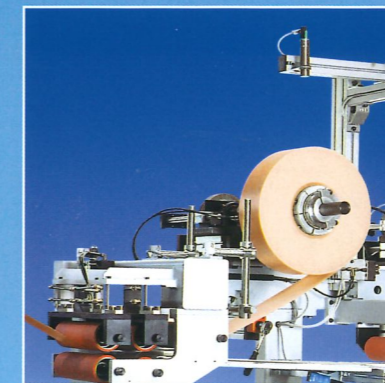

Profile wrapping

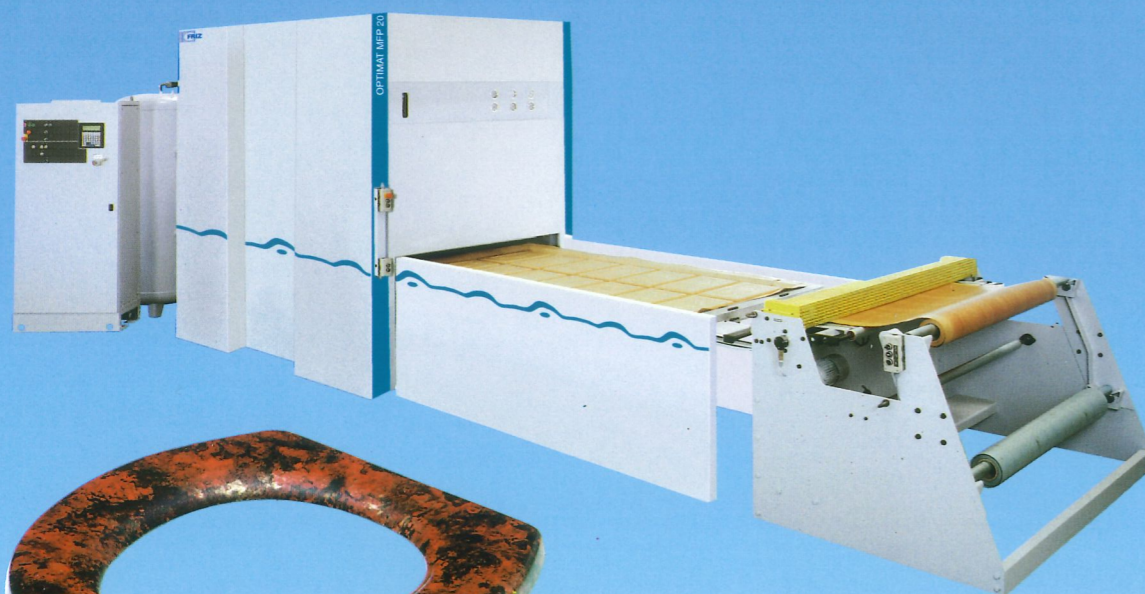

Some Highlights!

- Glue applicator units with slot-nozzle technology (adjustable application width, thin adhesive film)
- Automatic change-over systems for laminating material (without production stop)
- Automatic tool change systems (hardly any production stop)

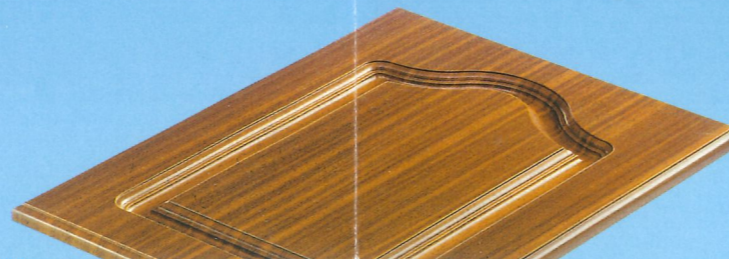

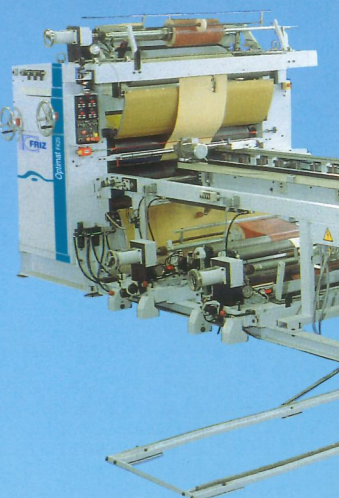

Membrane form presses

And also in membrane press technology...

...we were the first. From 1937 until today we have been most of the time the pioneers of new technologies, e. g. the first press to laminate with PO-foils without restrictions.

Today we offer a wide range of machines in all performance classes. The best thing is, to ask us always first.

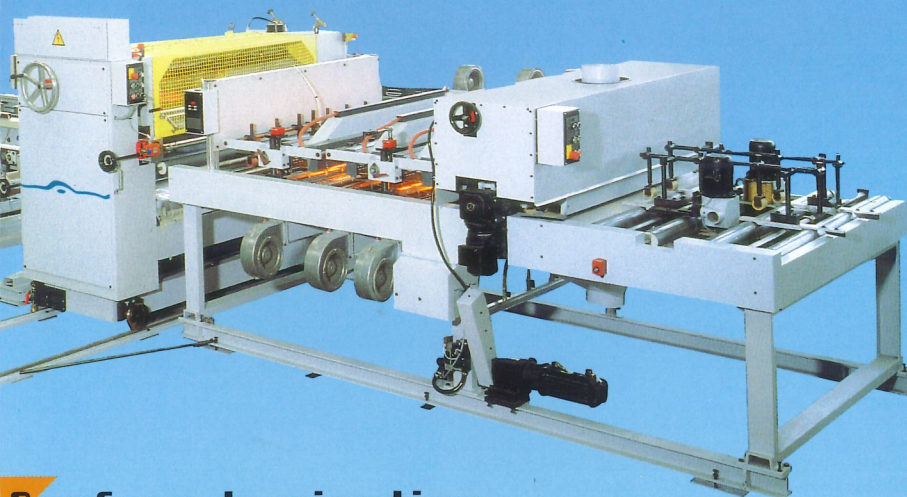

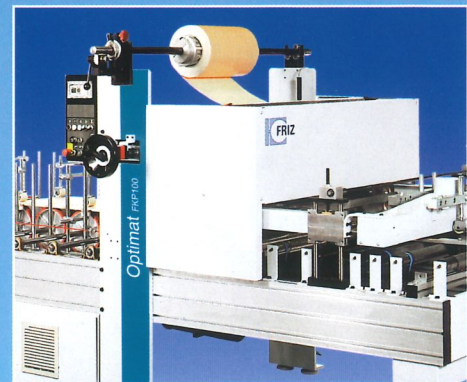

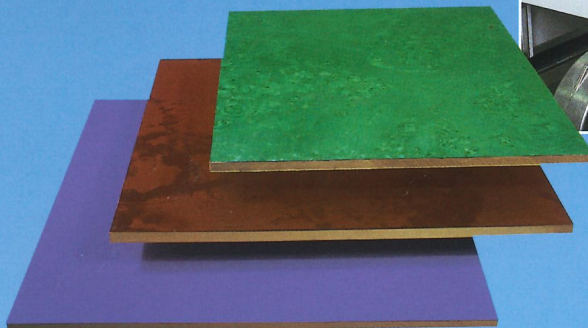

Production speeds of up to 50 meters per minute...

... are not utopia in surface laminating! We realise this already. We do not only build surface laminating lines for single or double-sided lamination, but also lines with integrated edge wrapping, this means seamless transfer from the surface into the edge.

The integrated edge-sealing with extremely high production speeds allows the use of thin decorative foils also with particle board. Our automatic change-over systems make it possible to change the decor without production stop.

Let us know your requirements - you will be fascinated by our solutions!

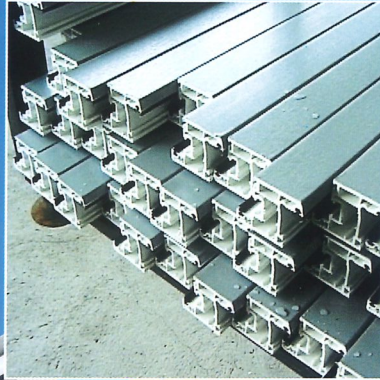

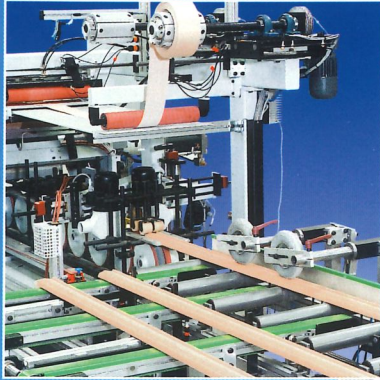

Surface laminating

At Friz...

...you will find many solutions for machines and production lines for surface laminating. We offer our customers a wide range of possible applications. With a FRIZ machine you can be sure: You have bought innovation tailored to requirements.

FRIZ is your competent partner for laminating technology.

Today our products are not only used in the furniture and building trade, but also in the automotive industry, for steel upgrading and also in the plastics industry.

We laminate on...

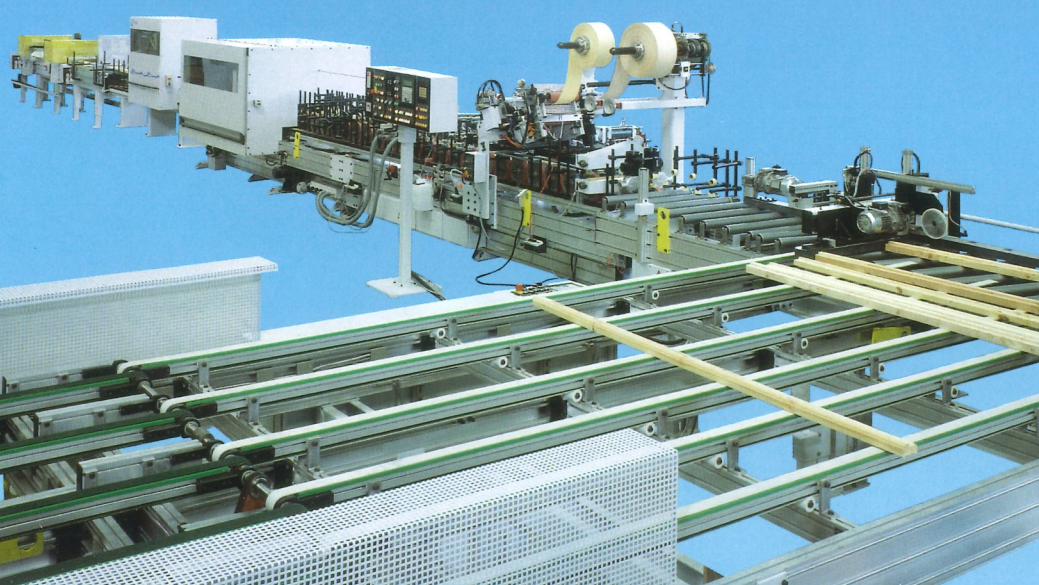

...nearly all core materials: wood, wood derivatives, plastics, metals, etc.

We laminate with...

...nearly all surface materials: veneer, paper, plastic foils, laminates, metal foils etc.

We bond with...

...hotmelts, PUR-, dispersion-, solvent adhesives, etc.

The modular construction...

...of our machines is industry leading and very economically. You compose the for your ideal machine the way you would like to have it. And that of course from a vast choice of individual modules.

Please take us at our word and ask for your customized machine.

For us, quality does not only mean...

...certification according to ISO 9001.

Quality starts with competent consulting prior to the purchase. Highly qualified salesmen with many years of experience advise you on the economic and market-conform conception of machines or installations.

Experienced technicians examine reliability and user-friendliness. Consequent modular engineering ensures not only economic solutions but provide also for a retrofit of existing machines to adapt them to changed market requirements.

Efficient Homatic controls guarantee fast and simple handling, high automation and control.

Quality includes high machine availability. Tele-diagnostics mostly solve problems within a few minutes.

But if there is a real emergency, irrespective in which part of the world you are, the global Homag Group service ensures fast help on the spot by factory-trained and experienced technicians and a fast spare parts delivery.
