INTERWOOD Special FHU Upstroke Press

INTERWOOD have been in the forefront of supplying British woodworking machines throughout the world since 1928 when the Company was founded. The Company markets a comprehensive range of presses, both in standardized ranges and to meet the most stringent individual specifications. Every Interwood press is built from the finest materials available by skilled engineers whose knowledge, expertise and experience has helped establish the Company as one of the foremost press manufacturers in Europe. Quality and choice are fully supported by Interwood's installation, technical, advisory and after-sales service.

The INTERWOOD range of high speed direct drive routing machines is also well known for accurate cutting, shaping and drilling of timber and wood based, plastic and non-ferrous metal materials. The direct drive unit, driven through a frequency changer, has long been accepted as being the best system for providing effective high speed routing without any loss of power.

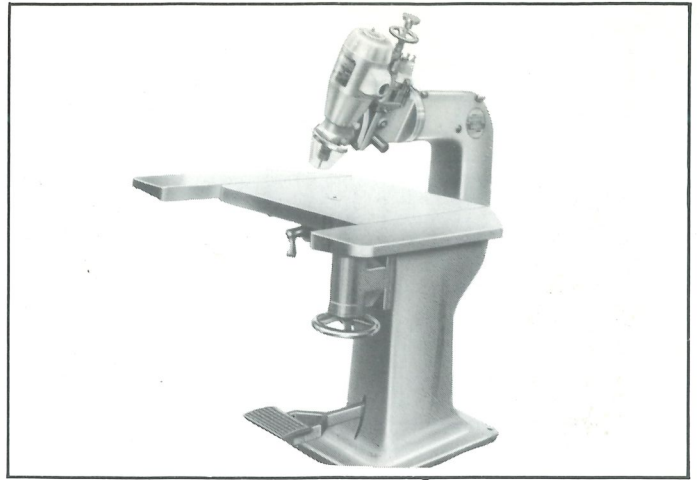

Above and overleaf can be found a representative selection of the machines at present being supplied both in this country and overseas.
