

OPTICUT 200 SERIES

Cross cutting to the point: everything you need for performance-oriented cutting

The OptiCut 200 Series: the great concept for economic cross-cutting

Consistently high daily rates and ultra-simple operation are the hallmarks of the series. Both the universal OptiCut 200, the higher-powered OptiCut 260 and the top-precision OptiCut 200 Exact offer fully optimised features as standard. The linear measurement of the entire workpiece is performed before the first saw cut irrespective of drive and slip. This maximises waste reduction and value creation. That way the OptiCut pays for itself in next to no time. Minimal moving masses and an intelligent drive system ensure optimal dynamics.

Fixed length cutting
Defect cutting
Optimization

WEINIG produces the latest computer technology and software in-house. All OptiCut 200 models of the series can be operated very simply via the OptiCom terminal. Simply create a cutting list and away you go! Operating reliability is guaranteed even in extreme conditions. What's more: WEINIG customers benefit from the comprehensive service of an experienced manufacturer and the security of the world-wide WEINIG.

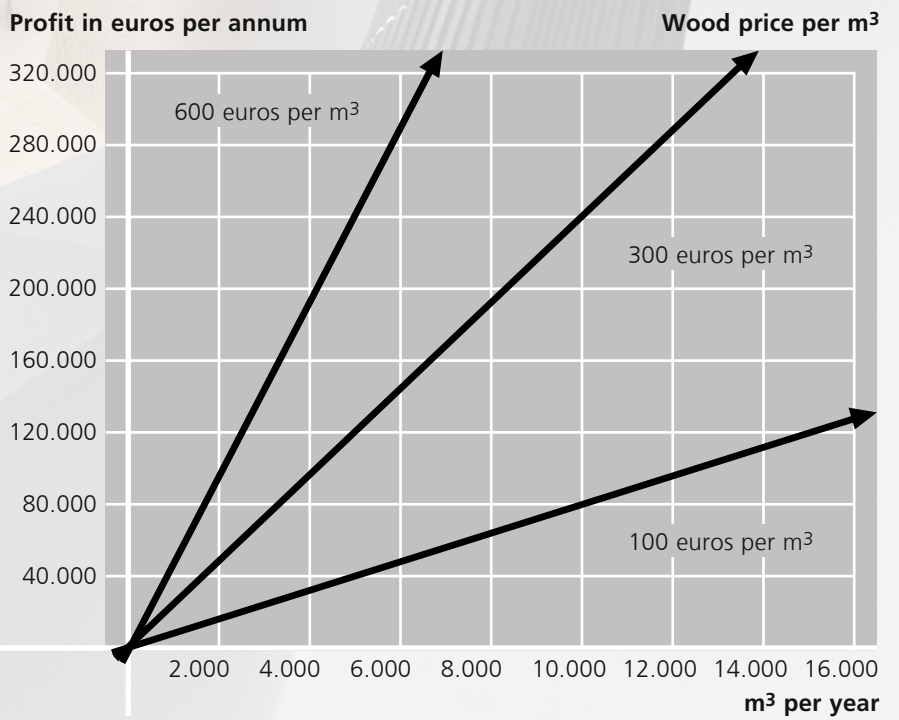

OptiCut 200 – a cut above the rest!

- Consistently high continuous output
- Non slip-dependent linear measurement
- Exact lengths free from defects
- Full optimisation for maximum yields – up to 8 quality categories
- Easily exchangeable feed rollers
- Wide drive rollers for secure workpiece transportation
- Individually controlled pressure rollers for reduced wear and greater precision
- Optimal automatic sorting
- Effective waste disposal, e.g. with waste gate
- Numerous options, many retrofittable
- Convenient scanner integration
- Automation potential (e.g. system solutions)

Potential savings thanks to optimising

WEINIG gives you more value for money: maximum profit thanks to intelligent cross-cutting

Profitable length cutting is guaranteed with the high-precision OptiCut Series. In order to maximise value creation, the OptiCut 200 optimising cross-cut saws not only cut out defects but also calculate the best possible length combination from the available fixed lengths in the cutting list. That way a maximum yield and/or material value is always achieved. Finger joint lengths are fully integrated in the optimisation process and wood can be assigned to up to 8 different quality categories. The wood is simply marked and placed in the feeding device of the machine. This task is greatly simplified by the horizontal linear guide. Fully automatic detection systems (scanners) can of course also be integrated into the cutting line.

Dynamic feed, Precise positioning, High-speed cutting

The wide feed rollers grip the wood securely. The rollers are embedded deep in the table to prevent short lengths from tilting and so ensure a straight, exact cut. Individually controlled pressure rollers lowered from above generate the necessary counter-pressure for extremely rapid and precise positioning without performance-reducing corrections. The pressure rollers are not lowered until after the beginning of the board, resulting in reduced vibration and wear. Powerful drive units guarantee a high continuous output. The rapid saw stroke ensures a high daily throughput of wood.

OptiCut 200 and 260: strong performance thanks to intelligent solutions

The secret of the OptiCut 200 Series lies in maintaining constant accuracy at high speeds. Non drive-dependent measuring wheels only measure when the wood is in motion. This means that uncontrolled slip or belt stretch in the feed system do not distort the measuring result, so that the machine cuts exactly in the intended place. This avoids defects in the quality wood and guarantees exact fixed lengths irrespective of the wood quality. Commercially available conveyor belts reduce the running costs of these all-round economic machines.

OptiCut 200 Exact: the number-one choice for top precision

When it comes to maximising linear precision, you can't do better than the OptiCut 200 Exact. Its special measuring technique allows accuracies of up to ± 0.5 mm for up to 8 preferred lengths. Thanks to an intelligent saw blade control system, tear-out can be reduced and a top-quality cut surface obtained. In order to maximise the angularity of the cut, an active lateral pressure can also be applied which presses the workpiece additionally against the continuous fence. This results in top precision and in many cases eliminates the need for an additional machining step.

OptiCut 200 Extreme: the powerpack for top performance

For demanding or rough wood qualities, there is the OptiCut 200 Extreme. A robust chain feed ensures secure transport of even tapering or highly irregular workpieces. A special measuring system reliably records

the entire wood length, so that even under-sized parts can be handled in a controlled manner in the saw. The chain conveyor guarantees a high level of dimensional accuracy by preventing the workpiece from slipping during

transportation. The measuring wheel in the saw ensures exact cutting of the quality wood irrespective of slip. Thanks to powerful motors, extremely high daily rates can be achieved.

The OptiCut optimisation function: more profit and greater transparency

OptiCut cross-cut saws can be controlled via the intuitive OptiCom Pro touchscreen. This software helps you get the most out of the material and so maximise your profits. This advanced solution can be integrated in company networks and keeps production statistics for greater transparency in wood purchasing and production output. Further advantages:

- Secure operation without hard disk
- Secure storage on flash card
- Direct printer connection
- Can be directly integrated in Ethernet networks
- Convenient generation of cutting lists and statistical evaluations in the office
- Ideal solution for networking management and production

- Possibility of integration into sector solutions

Fixed length cutting, defect removal, optimisation – optimisation can easily save a good 8 % or more waste. The OptiCut therefore pays for itself in next to no time.

Perfect sorting: fully automatic with the waste gate

Clearing the way for accepted lengths! When it comes to sorting high cutting outputs, the effective separation of waste from quality wood is particularly important. The WEINIG waste gate offers a reliable solution to this problem for all saws of the OptiCut 200 Series. The accuracy of the quality wood sorting process increases the production flow of the cutting line.

The waste gate

The intelligently controlled waste gate is integrated directly in the saw and is precisely adjusted to the output of the cross-cut saws. This ensures reliable separation of rejects from pieces of quality wood and avoids problems with sorting and further processing. Thanks to the multi-stage system, longer waste parts can also be filtered out directly, thus avoiding performance-reducing additional cuts. The ultimate solution for reliable sorting and troublefree production – all at full saw capacity!

Automatic sorting

The OptiCut cuts at lightning speed. And identifies every cut length. Sorting parts automatically by length, quality etc. from the outset is a logical way of doing things, particularly when it comes to order-based production. That way you simplify your logistics and save on personnel.

Exchangeable feed rollers: top performance with all kinds of wood

Different wood qualities impose different requirements. Thus, the feed rollers of the OptiCut 200 can be changed very quickly in order to respond to the respective requirements. Rough and planed qualities can now be readily processed in the same shift, and resin-coated rollers are easily cleaned for consistently high performance in every shift.

OptiCut with intelligent saw blade control: clean cut and minimal tear-out

Servo-motor drive of the saw stroke is optionally available. Due to the controlled exit of the saw blade from the workpiece the tear-out is reduced to a minimum. The other cutting phases on the other hand are performance-optimised. Waste or grades in which tear-out is less of a problem can be cut at maximum speed.

OptiCut with VarioSpeed: continuous cross-cutting thanks to non-stop feed

Why pay out for more saws than you need? The OptiCut offers enormous performance potential right across the board. To exploit this capacity to the full, the intelligently controlled VarioSpeed reduces the distances between the workpieces as much as possible. That way the OptiCut is supplied continuously with wood, making the system even more economic.

OptiCut with identification technology: clear workpiece identification

Easy handling of the sawn timber, warehouse identification, order-based assignment, product-based logistics – in all these cases, the identification of the cut lengths has an important role to play. Thus, a clearer overview, lower costs or in general the use of cost-optimised production processes are made possible. Number or code labelling is performed directly on the workpiece, from the side or above.

WEINIG OptiCut cutting lines: forward-looking solutions with top potential

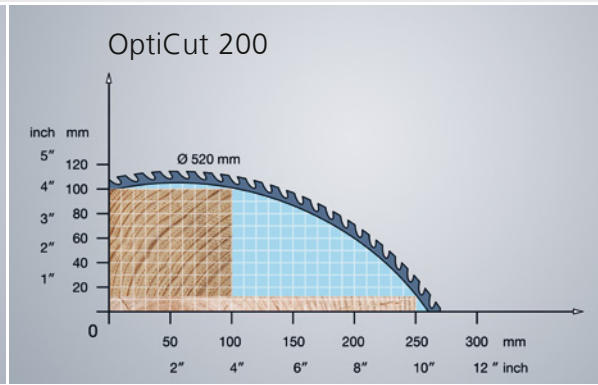

WEINIG OptiCut cutting lines are built on modular principles, thus ensuring that you are well equipped for the future. With the relevant upgrades, you can ensure a rapid response to changing market requirements. Useful add-ons in this connection are mechanised feed systems, scanner systems or also the stacking device OptiCut Stacker.

WEINIG Scanner systems detect fully automatically and at lightning speed relevant workpiece characteristics such as branches, cracks and structural patterns, and supply up to 4 OptiCut high-speed saws with cutting data via intelligent mechanisms while maintaining full production speed.

The **OptiCut Stacker** is the ideal solution for the production of preferred lengths. These are stacked fully automatically to a stacking height of 1200 mm and at a rate of up to 80 parts/min. Different stacking patterns can be selected in the saw control system.

Attention! Bend and differing wood dimensions have to be taken into account when determining a possible wood cross section. The nominal values in our technical data apply here.

Overview table OptiCut 200 Series: standards and options

The matrix shows the main distinctive features of the different models. Your WEINIG expert will gladly provide you with further details in consideration of your individual requirements.

The figures provided are standard values for guidance only. Please ask us if you have other requirements. Different values may apply to different versions. () = optional.

	OptiCut 200 Series					
	OptiCut 200		260 / Exact		Extreme	
Technical data:						
Min. nominal cross section	30 x 12 mm					
Max. cutting range*	260 x 12 mm (250 x 12 mm) 160 x 80 mm (100 x 100 mm)					
Max. ingoing lengths	6300 mm					
Max. feed speed	180 – 240 m/min					
Cutting accuracy up to 1000 mm cutting length	± 0.8 mm (model Exact ± 0.5 mm)					
Cutting accuracy up to 2500 mm cutting length	± 1.5 mm (model Exact ± 0.5 mm)					
Minimum cutting length / at end of workpiece	140 mm / 140 mm					
*Larger cutting ranges on request

WEINIG quality: The sum of many properties

Not many companies succeed in becoming a brand. WEINIG has succeeded in doing so. Trust plays a central role here. And the ability to prove this trust on a daily basis with our customer. We do this with quality. From product development to our supply of spare parts, from materials used to our worldwide service network. Based on employees noted for their expertise and passion for the product. Utmost care in assembling machines is part of this, as is continuous training. In order to maintain WEINIG's high standards we focus on vertical integration and independent quality management. Based on the world famous kaizen method, our production undergoes a continuous optimization process.

But WEINIG quality also means aligning production for the future with open machine systems, energy efficiency and sustainability. All these characteristics blend to create a product praised by our customers around the globe as outstanding. We call it 100% WEINIG quality.

WEINIG LifeTime Services: Very close to customers

Customer relations are good. But we have a better word for it: WEINIG LifeTime Services. Supported by people who want to share their enthusiasm for wood with others. And when experts start talking together, a solution is not far away. This is why WEINIG LifeTime Services focuses on dialog with you, on outstanding training and a local support presence. The global WEINIG service network is so densely spread like no other in the sector. For you this means easy communication in your own language and rapid help. Whether by telephone or by a technician on site. We are here for you when you need it. You can order any spare part you need via the hotline for rapid delivery - even old models.

You will be advised in detail by a professional WEINIG expert in your country. In our individually tailored training programs you can find out how to optimally exploit the capabilities of your machine. Our specialists are always open to your production tasks.

- Subsidiaries in all continents of the globe
- Local WEINIG expert who speaks your language
- Mobile team of over 300 service technicians
- Spare parts via the hotline
- Professional advice by specialists via the hotline
- 6 day service
- Individually tailored training program
- Service agreements on request
- International ExpoCenter
- Financing to suit your needs
